Mounting Manner:

Soil Surface measure method

1. Select a representative soil environment to clean up surface debris and vegetation
2. Insert the sensor vertically and completely into the soil
3. If there is a hard object, the measurement location should be replaced and re-measured
4. For accurate data, it is recommended to measure multiple times and take the average

MODBUS RTU Communication Protocol

(Apply to CDT-22B product)

Baud Rate: 9600
Data Bits: 8
Stop Bit: 1
Check Bit: None

1.1 CRC Description:

Among all the following instructions, the two bytes of CRC16 in MODBUS RTU protocol are as follows: the low byte comes before and the high byte comes after.

In the following instructions, the assumed sensor address is 0x01 (the default sensor address is 01).

1.2 Return Error Code Rule:

When receive error instruction (including CRC16 validation error), no error codes will be returned. It is considered to be a failure, when there is no return data in 200ms after the instruction is issued. Upper computer may resend instruction.

1.3 Standard MODBUS register description

Special Notice:

The quantity or length of the register in MODBUS is two bytes with 16 bits as a unit (the high byte comes first, and the low bytes follows), instead of one byte with 8 bits as a unit.

User shall ensure that the address and quantity of register in command are confined within the range specified by the system. Otherwise, the output of the sensor will be unpredictable. Users shall ensure that the MODBUS command complies with the requirements of this manual in the software design of the upper computer and the minimum query period supported is 1s/ time.

Input register: read with function code 03

Address	Operation	Contents	Note
0x0000	Read-only	Temperature, a hexadecimal number magnified by 10 times. For example, 0x0116 indicates 278/10=27.8°C	
0x0001	Read-only	Moisture , a hexadecimal number magnified by 10 times. For example, 0x03E8 indicates 1000/10=100%	
0x0030	Read/Write	Device Address(1-255)	Default address 01

1.4 Electrical Connections

Connector (cable)	Voltage/Current	RS485
Red	V+	V+
Black	V-	V-
Yellow	/	RS485A
Green / Blue	/	RS485B

1.5 Communication Example

The following is an example of how to use MODBUS RTU commands to access system registers:

1. Read multiple input registers (real time data) command

Send: 01 03 00 00 00 02 C4 08

03	03	00 00	00 02	C4 08
System Address	Function Code	Register Address	Number of Registers	CRC16 check digit automatically generated by software

Answer: 01 03 04 01 16 03 E8 1A B5

01	03	04	01 16 03 E8	1A B5
System Address	Function Code	The number of bytes in a data segment	Segment Data	CRC16 check bit

Analytical Data:

$$0x0116 = 0x01 * 256 + 0x16 = 278$$

$$\text{Temperature} = 278/10 = 27.8^{\circ}\text{C}$$

$$0x03E8 = 0x03 * 256 + 0xE8 = 1000$$

$$\text{Moisture} = 1000/10 = 100\%$$

2. Modify internal register (system address) command (change the address to 0x02)

Send: 01 06 00 30 00 02 08 04

01	06	00 30	00 02	08 04
System Address	Function Code	Register Address	New Address	CRC16 check digit automatically generated by software

Answer: 01 06 00 30 00 02 08 04 (indicates that the modification is successful)

Warranty and After-sales Service:
